

Tracker first. One employer-paid Internet test only if the leak is fixed wireless or non-mover housing.

One sentence a CEO can refuse

This quarter, stand up a quarterly residential-Internet net-loss tracker on the core (who left and why), and only if the fill is fixed wireless or housing among non-movers, authorize a two-quarter test of one employer-paid residential Spectrum Internet account on plant already passed; refuse it if the home is off plant, the household already has Spectrum, or the line dies when employment ends.

A billed account is one residential Spectrum Internet subscription. The test count is new accounts opened, minus homes that already have Spectrum, minus lines that die when employment ends. No take-up rate is in the file.

Internet is already 43% of Q1 2026 revenue, and it is the line that shrank (–\$78 million)

CEO question: What am I actually trying to fix?

Shares = line ÷ \$13,597 million, one decimal. Video 23.9% (the talk track’s “about 24%”). Mobile service 7.7%. Internet –\$78 million is \$5,852 million versus \$5,930 million (–1.3%). The –117,000 is residential Internet quarterly net additions; total Internet was –120,000. Source: Charter Ex99.1, first quarter 2026.

Residential Internet dollars fell \$78 million because volume took \$87 million and rate put back \$9 million

CEO question: What does this cost, and what do I give up?

Full-year 2025 check, printed in the 10-K: rate and mix +\$785 million covered volume -\$380 million, net +\$405 million, on 393,000 fewer residential Internet customers. The first quarter is when the base won.

The -\$90 million / +\$12 million split in the earlier talk track is derived, not printed. Holding last year's implied rate (\$70.58) on this year's average base costs \$-89.8 million; the rate change puts back \$11.8 million. Implied rate \$70.72 versus \$70.58. About \$0.94 more per month (\$71.66) would have held the dollars flat on that same identity. Those figures do not replace the printed -\$87 / +\$9.

Printed bridge: Charter Form 10-Q, quarter ended 31 March 2026, "Internet revenues from our residential customers." FY2025 bridge: Form 10-K, year ended 31 December 2025. Derived identity recomputed in Analysis/ehb-unit-economics/recompute_rate_volume.py. Quarterly customer loss -117,000 is not the 10-Q's -455,000 year-over-year change in ending customers.

Company take is 54.0% of 58.7 million passings; rural take is 38.1% after \$7.7 billion

CEO question: What do I give up?

\$93.8 billion principal and 4.18× net leverage at 30 June 2026. This density is not a consumer price match, and it is not a reason to build more rural miles.

Later public fact, same story: second-quarter penetration 53.4% on 58.981 million passings (58,981 thousand). Contribution per incremental Internet account: not disclosed. Consumer acquisition cost: not disclosed. Left blank.

Company 54.0% is 31,683 thousand relationships ÷ 58,661 thousand estimated passings (Ex99.1, 31 March 2026). “Nearly 59 million” is the release’s prose; the table is 58.661 million. Rural 38.1% is 527 thousand relationships ÷ 1,385 thousand passings (Q1 2026 trending; the talk track rounded this to 38%). \$7.7 billion: FY2025 10-K, subsidized rural construction since the start of 2022 through 31 December 2025. Principal: Q2 2026 Ex99.1. Leverage: Q2 2026 10-Q.

After the tracker, test one employer-paid account for two quarters only if the leak is fixed wireless or non-mover housing

CEO question: What do you want me to do, who does it, and by when?

Loss reason	Fit	What the room should hear
Fixed wireless	Best	Authorize the two-quarter test only if this is the fill
Fiber	Works	Team score. An earlier check said no. Do not lead with it.
Satellite	No	Refuse the employer test
Housing, household did not move	Best	Authorize the test only for non-movers, on plant already passed
Non-pay	Works	Team score. An earlier check said no. Do not fire it the same quarter.
No dominant reason	No	Refuse the employer test

Team scores from Decisions/CHURN. Accent only on the two Best rows. Fiber and non-pay stay “Works,” with the footnote that an earlier validation said no.

Gate	Line
Capacity	The miles are already built.
Capability	Unknown whether a broker can put Internet on a benefits ballot. That is the first gate. The cell is blank.
Calendar	Tracker question this week. First fill is one quarter. The test is two quarters after that fill, not before.
Commitment	Say no if the fill is not fixed wireless or non-mover housing.

Operations and marketing fill the tracker. Sales operations run one employer test only if the cell is fixed wireless or non-mover housing. It does not close the 117,000. No take-up is named.

Do not claim

Figure people reach for	What it is not
94.6% of jobs in Charter-present states	Not serviceable homes
54.1% of payroll at firms of 500 or more	Not covered lives
Top 10 brokers' 44% of Form 5500 compensation	Not covered lives
13.3% ACS usually works from home	Not the ATUS 32.5% any-work-at-home rate
Charter leads 19 states, Comcast 27	Locations, not subscribers
Mobile +368,000 lines and +\$138 million	Did not replace the Internet print of –117,000 customers and –\$78 million

Mobile verified in Q1 2026 Ex99.1: total lines +368,000; mobile service revenue \$1,052 million versus \$914 million (+\$138 million). The other refusals are locked in Decisions/EH&B/README.md (SUSB 2022, ACS 2024, ATUS 2024, FCC BDC 31 Dec 2025, PlanOptica Form 5500 compensation, M5 jobs-in-footprint).
