

Five gates are specified; none of them yet has a Charter channel number

M1, M2, M5, and M13 are valid measurement contracts with the specified Charter figure still blank. M9 is a valid gate that two different rates were glued into — split who pays (M9a) from who enrolls (M9b) before anyone quotes take-up. This file synthesizes the five completed validations. It does not size a TAM and it does not invent take-up, serviceable-home percent, broker lives by state, or channel net adds.

What this file will not fill

Charter take-up of internet-as-benefit; serviceable-home percent of any book; broker-placed lives by state; M13 channel account counts. Those cells stay blank / not retrieved. Do not paste an analogue, a state employment share, or company Internet net adds into the blank.

Scorecard — what each validation lets you use

Metric	Verdict	What you can use
M1 · Broker-placed covered lives in Spectrum states	Valid — numerator blank	National ESI scale (KFF / MEPS / EBSA) and Charter's 42-state presence. The 168.2M / 178.2M ESI overlay is not M1. SUSB 45.9% is not M1.
M2 · Large-broker concentration of that book	Valid — wrong unit	PlanOptica 44% top-10 of Form 5500 compensation; Business Insurance 67% top-10 of Top 100 revenue. Neither is lives.
M5 · Serviceable-home share of enrolled employees	Valid — no number	The hard footprint gate. 94.6% of SUSB jobs in 42 Charter-present states is an ESTIMATED ceiling, not M5. Plant share runs Hawaii 92% to Rhode Island 0.02%.
M9 · Payor model and enrollment take-up	Needs split M9a / M9b	Analogues only. Closest internet-as-benefit offer analogue is SHRM 2017 5% of employers. KFF 76% medical take-up is the wrong analogue. Charter take-up is blank.
M13 · Net new residential Internet accounts	Valid — tighten to P–E–D	M13 = path-tagged provisions – existing/payer-only – same-window job-exit disconnects. Q1 2026 residential Internet – 117k is company context, not this channel.

Sources: validation canvases chtr-ehb-m1-broker-covered-lives, chtr-ehb-m2-large-broker-concentration, chtr-ehb-m5-serviceable-home-share, chtr-ehb-m9-payor-takeup, chtr-ehb-m13-net-new-residential · parent register chtr-ehb-broker-channel-core-metrics · arithmetic in Analysis/ehb-broker-metrics/m1, m2, m5, m9, m13. Original register also in Decisions/EH&B/Brokerage Metrics.xlsx (Core metrics). This digest does not overwrite that register.

Naming collision

Repo folder Decisions/EH&B means existing homes and businesses on plant already built. This digest means Employee Health & Benefits (insurance). A broker channel that provisions residential Internet would feed existing-plant Internet net adds — it does not redefine the folder.

Cheapest kill still sits outside these five

The parent register's cheapest stop is M10: in the pilot states, may the brokerage firm place or enroll Spectrum residential Internet as an employer benefit, or only refer? One counsel memo. These five metrics assume that question is still open.

M1 is the right reach gate — the specified number is blank, and a “Spectrum state” worksite screen would barely fail anyone

Valid

Verdict — numerator blank

Not retrieved

Broker-placed lives in Charter states

94.4%

FLAGGED: ESI persons living in Charter-present states — not M1

Definition: employees enrolled in broker-placed medical (or full benefits) at employers with at least one worksite in a Charter-present state, over that named broker’s US medical book. Unit: percent and absolute employees. Report dependents separately. Spectrum state = Charter-present on FCC BDC D25 (provider_id 130235): 42 states. Charter-lead = 19 states. Absent = AK, IA, ND, OK, SD, AR, DE, UT + DC.

M1 gates whether a broker book even reaches employers Charter could put a residential Internet account in front of. It does not gate take-up, commissions, or net adds. The “any worksite in a Spectrum state” rule is a weak kill for a national broker: Charter reports some plant in 42 of 50 states.

Do not substitute SUSB 45.9% or the 168.2M / 178.2M overlay for this metric

Census SUSB 2022 payroll employment at firms under 500 is 45.9% of US employment — the labor market, not who buys medical through a broker. The ESI overlay below is all employer-sponsored insurance by residence, not a broker book.

Only 10.2 million ESI persons live outside Charter-present states — that overlay is not a kill, and it is not M1

Source: EBSA Health Insurance Coverage Bulletin Table 1A, CY2023 ESI persons (millions) × FCC BDC D25 Charter presence. Present 168.2M (94.4% of printed USA 178.2M); lead 80.7M (45.3%); absent 10.2M. State cells sum to 178.4M vs printed USA 178.2M (bulletin rounding). Residence is not worksite. ESI is not broker-placed. Arithmetic: Analysis/ehb-broker-metrics/m1/summary.json. EBSA: <https://www.dol.gov/sites/dolgov/files/EBSA/researchers/data/health-and-welfare/health-insurance-coverage-bulletin-2024.pdf> · FCC: <https://broadbandmap.fcc.gov/data-download>

Closest retrieved figures — none of these is M1

ID	Figure	Value	Year	Origin	Why it is not M1
C5	Private-sector workers enrolled at own employer	65.6M	2024	RETRIEVED · AHRQ MEPS-IC	Own-employer enrollment, not broker-placed, not by state
C4	Workers covered through a current employer	82.8M	CY2023	RETRIEVED · EBSA CPS bulletin	Employees, still all ESI, not broker-placed
C3	ESI from own job, under 65	85.7M	Mar 2025	RETRIEVED · KFF / CPS ASEC	People, not a broker book
B1	Persons with any ESI	178.2M	CY2023	RETRIEVED · EBSA Table 1A	Includes dependents, retiree, COBRA
F1	Broker-placed lives in Charter-present states	blank	—	NOT RETRIEVED	This is M1. Leave blank.

Also retrieved, still not M1 (full table in the Excel M1 sheet): KFF ACS nonelderly ESI 154M (2025); AHIP >180M (AHIP-funded); Form 5500 ~88M participants (2023); Aon Health Solutions \$3.335B FY2024. MEPS-IC: https://meps.ahrq.gov/data_files/publications/rf54/rf54.pdf · KFF 2025 EHBS: <https://www.kff.org/health-costs/2025-employer-health-benefits-survey/> (Kaiser Family Foundation, not Kaiser Permanente; fielded by Davis Research) · Aon 10-K: <https://www.sec.gov/Archives/edgar/data/315293/000162828025006093/aon-20241231.htm> · Line register: Analysis/ehb-broker-metrics/m1/assumption_register.csv

Unknown / kill implication

Unknown: broker vs direct split; those lives by worksite or home state; which broker’s book is in scope; employee vs dependent. Public sources (KFF EHBS, Marsh / Aon / WTW / Gallagher 10-Ks, Form 5500) do not fill F1. Kill implication: if a named book has no employers Charter can put a residential Internet account in front of, the channel cannot win Spectrum residential from EH&B. A national book will almost never fail the weak “any worksite in a present state” screen — that is why the specified number staying blank is not a hidden yes.

Top 10 EH&B brokers hold 44% of Form 5500 compensation — not covered lives, and not few enough doors to cover the book

Valid

Verdict — wrong unit

44%

Top 10 share of EH&B Form 5500 compensation

Not retrieved

Specified lives share (top N ÷ broker-placed lives)

Definition: covered lives at the top N broker firms (register example: top 5 / top 10) ÷ total broker-placed covered lives in the same geography as M1. Unit: percent. N is not locked. Public rankings retrieve revenue (Business Insurance) and compensation (Form 5500). Lives share is blank on purpose.

Do not treat 44% or 67% as the specified metric
Business Insurance ranks U.S. brokerage revenue. PlanOptica ranks Form 5500 health-and-welfare compensation. Neither is lives. The two rankings do not share a unit or a denominator — their agreement would not validate M2.

Top 10 EH&B filing names hold 44% of Form 5500 compensation; 56% is a long tail

Source: PlanOptica health-and-welfare broker table, ranked by Form 5500 compensation (not lives). Public page lists 43,129 names. MMA 7.1% + Gallagher Benefit 5.9 + Lockton 5.8 + Mercer Health 5.0 + USI 4.3 + WTW US 4.3 + Hub Midwest 4.1 + Aon Consulting 2.8 + Alliant 2.5 + Brown & Brown 2.2 = 44.0%. Remainder 56.0%. URL: <https://planoptica.com/welfare/broker> · Underlying filings: U.S. DOL / EBSA Form 5500, paid for by plan sponsors. Indexer: PlanOptica (for-profit). Entity names are filing names — MMA and Mercer are separate; Hub is Midwest only. Arithmetic: Analysis/ehb-broker-metrics/m2/out/summary.json

ID	Figure	Value	Year	Origin	Unit caveat
B2	PlanOptica top 10 compensation share	44.0%	—	DERIVED · PlanOptica / Form 5500	Compensation, not lives
A5	BI top 10 / Top 100 U.S. brokerage revenue	67%	2024	DERIVED · Business Insurance	Revenue, P&C + benefits; of Top 100, not the market. Top 5 = 46.7%; Top 100 sum = \$79.8B
A7	MarshBerry citing BI next vintage	70%	2025	RETRIEVED · MarshBerry / BI	Different year — do not mix with 67%
D1/D2	KFF broker fees PMPM, small vs large group	\$29.79 / \$10.00	2024	RETRIEVED · KFF / Mark Farrah	Why compensation understates jumbo lives
X1	Covered-lives share at top N	blank	—	NOT RETRIEVED	This is specified M2. Leave blank.

BI PDF: https://communityprod.blob.core.windows.net/public/top_100_2025_bi.pdf · Directory: <https://www.businessinsurance.com/biresources/2025-agents-and-brokers-directory/> · Funded by Business Insurance / Crain Communications; brokers self-report. Firms with more than 49% of gross revenue from personal lines are excluded. KFF PMPM: <https://www.kff.org/health-costs/state-indicator/health-insurance-broker-compensation/> · MarshBerry 2025 vintage: <https://www.marshberry.com/resource/the-next-era-of-insurance-brokerage-the-top-100-defined-by-growth-consolidation-and-ai/> (broker M&A advisory thought leadership). Named 10-Ks (MMC, Aon, WTW, Gallagher) disclose revenue lines, not covered lives.

Unknown / kill implication

Unknown: specified lives share; brokers below the BI Top 100; Spectrum-state cut; welfare plans and jumbo consulting fees off Form 5500 Schedule A; sister-entity undercount (Hub Midwest, WTW US LLC). Channel-architecture implication: the closest EH&B proxy says a handful of national partnerships does not cover the book (56% of observed compensation sits in a 43,119-name tail). That changes how many doors to open. It is not a product go-live. Lives share — the specified number — remains unknown, so this gate is directional, not closed.

M5 is the right hard gate; we cannot claim a serviceable-home share — 42-state presence is not employee-home serviceability

Valid

Verdict on the metric

None

Verdict on a number

94.6%

ESTIMATED ceiling — SUSB jobs in Charter-present states, not M5

Definition: enrolled (or broker-covered) employees whose residential address passes a Spectrum residential serviceability check ÷ enrolled / covered employees in the pilot book who supply a home address. Unit: percent. Hard fail for out-of-footprint homes. Serviceability is installable residential Internet at that address — not “lives in a Charter state,” not FCC advertised availability alone, and not already a subscriber (that cut is a later metric).

No employee-level serviceable percent exists in this repo
Do not read 94.6% as the share of enrolled employees Charter can serve at home. Do not read a state’s Charter location share as that rate either. M5 needs a consented home address on a named book, geocoded and matched to Spectrum residential serviceability. That file is not here.

The 94.6% ceiling is 128,435,628 ÷ 135,748,407: share of 2022 SUSB payroll employment in the 42 jurisdictions with any Charter residential filing as of 31 Dec 2025. The remaining 7,312,779 jobs (5.4%) are in Alaska, Arkansas, Delaware, the District of Columbia, Iowa, North Dakota, Oklahoma, South Dakota, and Utah. Four biases, all high: workplace not home; any presence not plant (Rhode Island and Maryland count as “in”); book ≠ nation; 2022 jobs nailed to 2025-12-31 plant.

SUSB 2022: https://www2.census.gov/programs-surveys/susb/tables/2022/us_state_naics_detailedsizes_2022.txt · Landing: <https://www.census.gov/data/datasets/2022/econ/susb/2022-susb.html> · Funded by U.S. Census Bureau. Ceiling C4 recomputed in Analysis/ehb-broker-metrics/m5/build_m5_proxy.py · must match Analysis/ehb-broker-metrics/m5/out/summary.json

Charter’s residential location share inside “present” states runs from 92% in Hawaii to 0.02% in Rhode Island

Selected states, sorted descending. Unit: percent of residential fabric units (res_st_pct × 100). Florida 36.2 is 0.3615 to one decimal; Rhode Island 0.02 is 0.0002; Maryland 0.2 is 0.0016. Across all 42 present jurisdictions, Charter’s estimated units are 33.6% of that group’s residential fabric (50,939,445 ÷ 151,719,024) — a plant statistic, still not M5. Unweighted median among the 42 is 20.3%. Source: FCC Broadband Data Collection / National Broadband Map, vintage 31 Dec 2025 (D25), revision 15 Sep 2026. Holding company Charter Communications, provider ID 130235. <https://broadbandmap.fcc.gov/data-download> · Arithmetic: Analysis/cable-share-small-firm/

ID	Figure	Value	Origin	Why it is not M5
A2	Serviceable-home share of enrolled employees	none	BLOCKING	No roster × address match. This is M5.
B1	Charter-present jurisdictions	42	RETRIEVED · FCC D25	Any filing, including Rhode Island at 106 estimated residential units
C4	SUSB jobs in those 42 jurisdictions	94.6%	ESTIMATED ceiling	Workplace employment, not homes; book ≠ nation
D3	Charter units ÷ fabric in the 42	33.6%	DERIVED · plant	BSLs in present states, not enrolled employees
X1	Employment-weighted state location share	refused	REFUSED	Two wrong substitutions. Not quoted as a rate.

Unknown / kill implication

Unknown: the single join that is M5 — consented employee home address × Spectrum residential serviceability on a named book. Write the denominator before the pilot (eligible-with-address for a go/no-go on the book; enrolled-with-address for fulfillment). Treat indeterminate (PO box, campus, stale HR file, MDU rights pending) as a third bucket, not a silent drop. Kill: if a consented address match on the candidate book shows Spectrum cannot fulfill the benefit as written for the homes the contract covers, and the design has no multi-ISP fallback, do not scale a national “included Spectrum Internet” benefit. The public 94.6% ceiling cannot clear or kill this. Only the roster match can. Addresses are for serviceability only — not usage, health, or productivity monitoring.

M9 is a valid gate glued from two metrics — split who pays from who enrolls; there is no Charter take-up number to cite

Needs split

Verdict — valid gate, two metrics

None

Charter take-up rate in this build

5%

Closest analogue: 2017 SHRM employer offer of subsidized home internet — not take-up

The register already named two rates under one ID. Keep both tests; stop reporting them as one number.

Split ID	Unit	Numerator / denominator	What a yes/no means
M9a · Payor mix	Employer (and lives)	Employers choosing employer-paid vs employee-paid voluntary vs hybrid ÷ pilot employers offered a design	Someone other than the employee is willing to fund the line — or not
M9b · Enrollment take-up	Eligible employee	Enrolled internet accounts ÷ eligible employees offered the benefit, inside each M9a cell	Eligible people actually elect the line once it is on the ballot

A blended enrolled/eligible headline across payor models is forbidden: 100% of a tiny employer-paid cell plus 4% of a large voluntary cell can look like a healthy mid-teens rate. Time-box M9b at close of open enrollment plus 90 days. Transfers of existing Spectrum accounts are enrollment, not net adds (M13 owns that).

No Charter internet-as-benefit SKU in this repo

Filings document Spectrum Internet, Mobile, TV, Voice, Advanced/Invincible WiFi, and rural. Brokerage Metrics.xlsx and the core-metrics canvas leave M9 blank on purpose. Do not fill the blank with an analogue. KFF 76% medical take-up among eligible workers is heavily subsidized core medical — the wrong analogue for home internet as a benefit.

Lifestyle-adjacent benefits are offered by a minority of employers — and those are offer rates, not take-up

Pet 22%, transit 12%, parking 10%, QSLP match 4%: SHRM 2025 Employee Benefits Survey (plan year 2025; n=3,969 U.S. HR professionals; unweighted; fielded 21 Jan–10 Mar 2025; funded by SHRM). Home internet 5%: SHRM 2017 customized benefits-prevalence (n≈2,717) — free, discounted, or subsidized home Internet service; offer, not enrollment; dated. SHRM 2025/2026 executive summaries publish at-home equipment subsidy (55% / 53%), not an internet-specific stipend. Do not treat equipment subsidy as internet. Chart scale 0–30 so the 5% bar is readable; bars still start at zero. Full analogue register: Analysis/ehb-broker-metrics/m9/analogue_register.csv

Role	Analogue	Rate	Year	Funder	Why it is not Charter take-up
Take-up (wrong analogue)	KFF medical take-up among eligible workers	76%	2025	KFF (nonprofit; not Kaiser Permanente). Davis Research. n=1,862 employers 10+	Heavily employer-subsidized core medical. Workers still pay 16% single / 26% family. Eligibility 80%; enrollment among workers at offering firms 61%.
Offer (closest)	SHRM subsidized home Internet	5%	2017	SHRM	Offer, not take-up. Dated. No Spectrum SKU.
Offer	SHRM pet insurance	22%	2025	SHRM	Offer, not enrollment. Pet ≠ internet.
Offer — not internet	SHRM at-home equipment subsidy	55% / 53%	2025 / 2026	SHRM	Equipment, not an internet stipend. LIMRA/EY interest rates are also not take-up (full analogue sheet in Excel).
Excluded	Stealth Agents "SHRM internet stipend 38%"	not used	2025	Secondary aggregator	Not retrieved from SHRM primary.
Charter M9	Internet-as-benefit take-up	blank	—	NOT RETRIEVED	Pilot is the source.

KFF 2025 EHBS: <https://www.kff.org/health-costs/2025-employer-health-benefits-survey/> · SHRM 2025 exec summary: https://www.shrm.org/content/dam/en/shrm/topics-tools/research/employee-benefits/2025_annual_benefits_survey_executive_summary.pdf · SHRM 2017 customized: <https://www.shrm.org/content/dam/en/shrm/topics-tools/news/organizational-employee-development/Benefits-Prevalence-Report-All-Industries-All-FTEs.pdf> · SHRM 2026 exec summary: https://www.shrm.org/content/dam/en/shrm/topics-tools/research/employee-benefits/2026_employee-benefits_executive-summary.pdf

Unknown / kill implication

Unknown: any Charter internet-as-benefit take-up; whether a SKU exists; 2026 prevalence of an internet stipend; payor mix on a real ballot. Write kill floors before the first employee sees an offer: if no pilot employer will fund employer-paid and none will put a voluntary SKU on the ballot — stop. If a design is on the ballot and voluntary take-up among eligibles in that cell, after OE plus 90 days, lands in the single digits with no path to change price or payor — do not scale on the hope that “benefits take-up is usually high.” Analogues bound the plausible range. Analogues are not the floor.

M13 is the channel’s Internet-print metric — but only as an account count, not as enrollments

Valid
Verdict — tighten to P–E–D

Not in repo
Channel M13 (accounts)

–117k
Company res. Internet net adds, Q1 2026 — context only

The earlier benefits analogy transfers only when the employer / broker path opens a household Spectrum Internet customer relationship. Enrollments, passings, and “employees reached” can all rise while the Internet print stays unchanged. The register definition mixed an account count with a percent of enrollments and omitted same-window job-exit disconnects. Tighten to one unit — residential Internet accounts — aligned to Charter’s Ex99.1 operating-statistic quarter:

M13_t = P_t – E_t – D_t
P · path-tagged provisions. Residential Spectrum Internet customer relationships (same PSU definition as Ex99.1 residential Internet) whose order in t is tagged to the broker / employer path. Count the billed household Internet PSU. Not a benefits enrollment row, not a mobile line, not a Spectrum Business circuit.
E · existing / payer-only. Subset of P where that household already had an active Spectrum residential Internet PSU at t–1. Employer becomes the payer, or a discount is applied, and no new customer relationship opens. Retention or mix, not net adds.
D · same-window job-exit disconnects. Subset of (P – E) that disconnect from Spectrum residential Internet in t because employment eligibility ended. Do not subtract households that stay Spectrum as self-pay. Job-exit after t is M14, not this period’s M13.

P, E, D, and M13 are blank. Do not invent a conversion of enrollments into accounts. Optional diagnostic, not M13: (P – E) / benefit enrollments — leave blank until a pilot produces both counts.

Company already reports this unit — not this channel

Period	Residential Internet net adds	What it is	File
FY2025	–393,000	10-K: residential Internet customers decreased vs 2024	PrimarySources/readable/CHTR-10-K-FY2025.md
Q1 2026	–117,000	Ex99.1 operating statistics, residential Internet quarterly net additions (117)	PrimarySources/readable/CHTR-Q1-2026-Earnings-Release-Ex99.1.md
Q2 2026	–166,000	Ex99.1 operating statistics, residential Internet quarterly net additions (166)	PrimarySources/readable/CHTR-Q2-2026-Earnings-Release-Ex99.1.md
Channel M13	blank	P – E – D for the broker / employer path	Not in repo. Do not scale company print by an invented take-up.

Q1 total Internet was –120k (residential –117k + small business –3k). M13 is residential only — do not use the –120k headline as the analog. These figures prove Charter tracks residential Internet net adds as accounts. They are not M13.

ID	Field required to compute M13	System	Status
D1	Channel tag: employer ID + broker / path code on the residential Internet PSU	Order entry / billing	MISSING
D2	Prior-account flag: active Spectrum residential Internet at t–1	Billing snapshot	MISSING
D3	Payer type: employer-billed vs employee-billed vs self-pay	Billing	MISSING
D4	Eligibility end date	Benefits-admin / employer roster	MISSING
D5	Disconnect date and whether the PSU actually ended	Billing	MISSING
D6	Window = Ex99.1 calendar quarter, locked before the pull	Reporting calendar	MISSING

Unknown / kill implication

Unknown: any channel net-add count; any conversion rate; any share of the –117k / –393k company print this path would close; contribution, subsidy, or broker cost (M14; inputs blank). Tagged is not incremental — a path tag does not prove the household would not have signed up anyway. Kill the channel as an Internet-print play if a time-boxed pilot with D1–D5 filled shows M13 ≈ 0 because almost all of P is E or D — even if enrollments are large. Do not substitute enrollments, passings, or reach.

Parent register: Decisions/EH&B/Brokerage Metrics.xlsx (Core metrics) and chtr-ehb-broker-channel-core-metrics.canvas.tsx.
